

Multiple Stimulus without Replacement

Student requirements: The student must be able to choose within a range of items

Target behaviour: The student touches any part of the item.

Instructions

1. Select items: Select up to 10 stimuli to evaluate, and write the name of the stimulus on the yellow column.
2. Prepare the area: Clear the assessment area of any distractors and arrange the stimuli in a semi-circle on a table, spread out equally from each other, and from the student.
3. Sample the stimuli: Bring student into assessment area and prompt him/her to interact with each item for 30 seconds. No recording is needed.
4. Present the stimuli: Instruct student to interact with one of the available stimuli.
 - Allow the student to interact with the chosen item for 30s
 - Remove the item
 - Rearrange the order of the remaining stimuli (e.g., rotate clockwise)
 - Block attempts to interact with more than one stimulus.
 - Write the order of the item selected in the first green column.
 - Repeat the procedure until either all items are selected, or until the student makes no choice no selection within 30 seconds from the beginning of the trial. If no selection is made in 30 seconds, the trial ends and all remaining items are recorded as "not recorded."
 - Repeat the assessment (3 to 5 times) and register the choice on the indicated column.
5. Results: Write the total amount of times the stimulus was selected and presented on the pink column, then calculate the percentage of times the item was selected.

$$\frac{\text{\#times stimulus was selected}}{\text{\#times stimulus was presented}} \times 100$$

Highly preferred items are those selected at least 80% of the trials in which it is presented.

Non-preferred items are those selected no more than 20% of the trials in which it is presented.
